EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Barry M. Shuman (Reg. No. 50,220) on 06/25/2009.

The application has been amended as follows:

Claim 9. (Currently Amended) The data processing device as defined in claim 3: the loop instruction having no branch target address information in an operand; and the branch information setting circuit including a circuit that calculates the branch target address based on the address in memory where the loop instruction is stored and a fixed value₁ and stores the calculated value in the branch target address storage register.

Claim 10. (Currently Amended) The data processing device as defined in claim 4: the loop instruction having no branch target address information in an operand; and the branch information setting circuit including a circuit that calculates the branch target address based on the address in memory where the loop instruction is stored and a fixed value₁ and stores the calculated value in the branch target address storage register.

Claim 11. (Currently Amended): The data processing device as defined in claim 5: the loop instruction having no branch target address information in an operand; and the branch information setting circuit including a circuit that calculates the branch target address based on the address in memory where the loop instruction is stored and a fixed value₁ and stores the calculated value in the branch target address storage register.

Claim 12. (Currently Amended): The data processing device as defined in claim 6: the loop instruction having no branch target address information in an operand; and the branch information setting circuit including a circuit that calculates the branch target address based on the address in memory where the loop instruction is stored and a fixed value₁ and stores the calculated value in the branch target address storage register.

2. The following is an examiner's statement of reasons for allowance:

Referring to claim 1, the prior art of record fails to teach and/or fairly suggest the limitation of a branch to the branch target address occurring when the fetch address is the branch occurring address after a x-th instruction from the branch setting instruction, x being a non-zero positive integer, the branch information setting circuit storing the branch occurring address in a branch occurring address storage register and the branch target address in a branch target address storage register, when the branch setting instruction is decoded, in combination with other recited limitations..

Referring to claim 2, the prior art of record fails to teach and/or fairly suggest the limitation of a branch to the branch target address occurring when the fetch address is the branch occurring address after a x-th instruction from the branch setting instruction, x being a non-zero positive integer, the branch information setting circuit storing the branch occurring address in a branch occurring address storage register and the branch target address in a branch target address storage register, when the branch setting instruction is decoded, in combination with other recited limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to FARLEY J. ABAD whose telephone number is (571) 270-3425. The examiner can normally be reached on Monday-Friday 7:30am-5:00pm EST.
